Description

Designed for comfort and practicality, and for users looking for that extra reach, the Outrek 10x42 is the model featuring the highest magnification in the range. In line with its siblings, it is sturdily-built and shrouded in high-protection rubber armour, featuring textured areas on the outer edges of the body to increase grip and to make holding easier.

Comfortable, rubber-covered eyecups twist out to click-lock in three extended positions, all of which deliver the full field of view at maximum extension.

A stippled focussing wheel ensures non-slip finger contact while adjusting the binocular's focus.

The 10x42 delivers a bright image, which is sharp with natural colours, this model featuring BaK4 prisms, fully multicoated lenses and a gas-filled body, rendering it waterproof.

Carrying a 5-year warranty, it is supplied with a lens cloth, soft protective carry case, neoprene neck strap, an articulated rainguard and stay-on rubber lens covers.

Features
Image
