### Description

Taking a step up from the Outrek binoculars and weighing only 510 grams, the Trailbird 8x32 is the lightest model in this range. Sharing the solidarity and sturdiness of the Outrek, this model is shrouded in high-protection rubber armour and it features furrowed and stippled textured areas on the outer edges of the body to increase grip and to make holding easier.

Comfortable, rubber-covered eyecups twist out to click-stop in two extended positions, which deliver the full field of view at their maximum extension.

A stippled focussing wheel ensures non-slip finger contact, turning smoothly and positively while adjusting the binocular's focus which, in the 8x32, is the fastest in the Trailbird range. At a mere 1 metre, this binocular also boasts the shortest close focus figure in the series.

The 8x32 delivers a crisp, bright image, which is sharp with natural colours, this model featuring BaK4 prisms with phase-corrected coatings, fully multicoated lenses and a gas-filled body, rendering it waterproof.

Carrying a 5-year warranty, it is supplied with a lens cloth, soft protective carry case, neoprene neck strap, an articulated rainguard and stay-on rubber lens covers.

### Features

#### Image

Completely  
waterproof to a depth  
of 1m for 30 minutes

Nitrogen purged &
