Description

Leofoto Poseidon LP-284C Carbon Fiber Tripod engineered to withstand the harshest conditions without compromising performance. Crafted with Toray 100% 10-layer carbon fibre leg tubes featuring a cross rhombus structure, this tripod delivers unparalleled strength, stability, and minimal vibration.

Designed to endure water, sand, and dust, this tripod boasts a maintenance-free system, saving valuable time for photographers/shooters and enhancing efficiency. Its anti-twist technology, with three embedded silica gel mats, ensures stability even in water.

Unlike traditional tripods with a centre column, the LP-284C features three fully folded legs, maximising stability and compactness. The hollow-out top plate design reduces weight while maintaining flexibility, ideal for shooters on the move.

Safety and anti-rotation are prioritised with three set screws on the top plate to secure the ball head, providing peace of mind during shoots. The included LH-30 Ball Head features a low-profile design for enhanced reliability, with an ergonomic main locking knob for easy handling and smooth movement.

Please be aware that any additional accessories shown in product images such as cameras, phones and arm attachments are shown for illustrative purposes only and are not included.
