

Swarovski NL Pure 12x52

The NL Pure 12x42 are a good choice for anyone looking for professional binoculars for observing in open countryside or mountain terrain. The objective lens diameter of 42 mm makes it possible to identify high-contrast details even in morning and evening light. An optional forehead rest ensures additional comfort during extended use and razor-sharp images.

Description

Product description

With their 12x magnification, the revolutionary NL Pure 12x42 binoculars bring even very distant details, for example in mountain terrain, up close. They offer the perfect combination of professional technology and comfortable handling. The large objective lens diameter of 42 mm allows a lot of light inside, even at dawn or dusk, and makes it possible to clearly identify even the smallest details.

The NL Pure 12x42 are ideal for the following purposes:

Binoculars for professional use

Perfect for observing in mountain terrain

For use in low light at dawn or dusk

For people who want to identify lots of details at long distances

Binoculars: Swarovski NL Pure 12x52

The NL Pure 12x42 binoculars are reliable and powerful companions in many situations, from mountain terrain to other outdoor settings. Their wasp waist ensures they sit ergonomically in your hand. For longer periods of use, the optional forehead rest is recommended for jitter-free images and to prevent fatigue.

Overview of the NL Pure 12x42:

12x magnification

113 m (123.6 yds) field of view at a distance of 1,000 m (1,093.6 yds).

Weight: 840 g (29.6 oz)

Dimensions: 158 x 131 x 71 mm (6.2 x 5.2 x 2.8 in)

Like all the binoculars in the NL Pure product series, the NL Pure 12x42 also feature the innovative SWAROVISION technology. The specially shaped lenses provide crystal-clear images all the way to the edges. If your eye moves in the large field of view, this technology eliminates the need to refocus.

Brief description of the SWAROVISION technology

The key feature of the ground-breaking SWAROVISION technology is the field flattener lenses which offset the curvature of the field of view and provide edge sharpness. This means the complete image stays sharp from the middle of the field of view all the way to the edges. There is no need to refocus if your eye moves in the image, you can immediately see every detail in absolute clarity. The special coating on the lenses in combination with the inert gas filling ensures color fidelity.

The NL Pure series

The binoculars in the NL Pure series offer an enormous field of view all the way to the edges. The wasp waist ensures that each optical device sits ergonomically in your hand. This makes all the binoculars in this product series loyal companions even during extended periods of use. The amazing quality provided by SWAROVISION and the field flattener lenses guarantees precise and razor-sharp images with no distortion.
