Description

HIGH QUALITY TELESCOPE FOR DISCERNING ENTRY/INTERMEDIATE-LEVEL ASTRONOMERS

The STARQUEST DX SERIES are complete telescope packages combining a selection of superb proven Sky-Watcher optics with the new, precision crafted StarQuest DX Deluxe Mount, after which the series is named. With the discerning, entry/intermediate-level observer in mind, who wants a telescope that does not compromise on quality, we are confident these telescopes, regardless of which model you choose, will not disappoint and most importantly provide a solid platform upon which to nurture and help grow a lasting interest in the fascinating hobby of astronomy.

The STARQUEST DX1026R is a classic two-element, air-spaced, achromatic refractor, with a very useful 102mm of unobstructed aperture. The objective lens is fully multi-coated to maximise light transmission, contrast and image sharpness. Its f/5.9 configuration makes it a good all rounder for observing the Moon, Bright Planets and a wide range of Deep-Sky objects.

The new generation STARQUEST DX MOUNT is a well-engineered equatorial mount that is lightweight and easy to manage, suited to both beginners and experienced observers alike. The mount, when polar aligned, allows you to easily track objects as they move across the night sky with its smoothly operated slow motion control cables. The mount has a generous payload capacity of 5kg and the fully adjustable stainless steel tripod offers excellent stability. The mount features 360º gearing on both the right ascension and declination axes. An optional D.C. Motor Drive (code 20940) can be installed to the R.A. axis for auto-tracking purposes. Capture celestial images with your smartphone with the supplied Smartphone Camera Adaptor!
