Description

## POWERFUL PERFORMANCE BUILT ON ADVANCED TECHNOLOGY

Whatever the story, the EOS R5 Mark II speaks your language. Shoot with breakneck speed and incredible resolution, and capture next-level video. All this from an agile camera body that inspires creativity from the moment you hold it.

### 45 megapixel back-illuminated stacked sensor

High-resolution photos and superb 8K 60p RAW video. This ultrafast, stacked sensor design minimises distortion in moving objects and allows blackout-free continuous shooting.

### Dual Pixel Intelligent AF

Track people, animals and objects even when they are momentarily hidden from view. Action Priority mode determines the subject in certain sports and moves the AF area accordingly.

### Advanced 45 megapixel stacked image sensor

A next-generation full-frame back-illuminated stacked CMOS sensor combines stunning resolution and dynamic range with incredible speed and video capabilities.

### 8K 60p RAW video

Take your filmmaking projects to new heights with Light RAW, for 12-bit 8K 60p capture using the full width of the camera's sensor.

### Eye-control AF

New for the EOS R5 Mark II, Eye-control AF is now more precise and reliable. It can accurately determine where you are looking and move the active AF point accordingly. Work intuitively, and keep your attention firmly on the subject.

### High ISO sensitivity transforms low-light work

A max ISO 51,200 sensitivity (extendable to 102,400) is supported by in-camera neural network noise reduction, for cleaner, more-detailed jpeg images.

### Customisable continuous shooting up to 30fps

Adjust the EOS R5 Mark II's continuous shooting speed in fine increments, capturing 45-megapixel images up to 30 times every second – a combination of speed and resolution that reveals the subtleties of movement in quickly changing scenes.

### Fast and accurate

Freeze moments in time with a top electronic shutter speed of 1/32,000 sec, and capture 4K video at up to 120p, including sound. The EOS R5 Mark II's fast sensor read-out minimises rolling-shutter distortion .

### Connected

Get your photos and video back to your client more quickly and reliably than ever, whether you're connected wirelessly with Wi-Fi 6E (region dependent) or tethered via USB. Choose an optional battery grip to connect via 2.5G BASE-T Ethernet.

### Whatever the weather

The EOS R5 Mark II is built to the exacting standards that serious image makers have come to love. Moisture and dust-resistant seals protect the camera in harsh environments. A magnesium alloy chassis is tough enough for professional use.

### Part of the EOS R System

Invest in a EOS R5 Mark II and you're getting more than a digital camera. You're acquiring an ever-growing, state-of-the-art imaging system that's designed for uncompromising performance and jaw-dropping image quality.
