

Spypoint Flex-Dark

Spypoint Goes Undercover The Spypoint FLEX-DARK features 4 adjustable low-glow/no-glow LEDs, allowing for truly covert wireless observation. With its 40 MP camera, the FLEX-DARK will capture full colour (by day) and black and white (at night) images and videos, sending them straight to a connected smartphone or tablet via the Spypoint app — so you can keep an eye on your observation area from 24/7, no matter where you are. Spypoint transmission plans enhance your viewing experience, sending more photos/videos to your phone and allowing you to stay up to date on activity wherever you are.

Description

Truly Covert Observation

The Spypoint FLEX-DARK enables truly covert, 24/7 wireless observation. A 40 MP camera and 4 no-glow LEDs with an invisible flash range of 30m will capture astonishingly clear images/videos by day and at night, without spooking observed animals or giving your camera's position away from any prying hands. The FLEX-DARK's 40 MP camera features a lightning-fast 0.3 second trigger speed, which almost guarantees no movement will be missed within the camera's observation area.

Images and videos are captured in full colour by day and in crisp black and white at night, and, thanks to dual-SIM LTE connectivity, these images are transmitted to your phone via the Spypoint app — so you can stay up to date with movement in your observation area from the comfort of your armchair.

Reliable Dual-SIM LTE Connection

LTE cellular network connectivity will achieve improved reliability and longevity, removing the need for a Wi-Fi connection and providing more autonomy for the FLEX-DARK in areas where a lack of reception or an electricity supply would make observation impossible. LTE wireless connectivity, a dual SIM card system, multi-carrier auto-connectivity, and its optimised antenna provides fast and reliable connection speeds, as well as significantly improved cellular coverage.

Trail Cameras: Spypoint Flex-Dark

How Does Dual-SIM Work?

The FLEX-DARK is provided with two preactivated and preinstalled SIM cards that work across all of the major network providers in the United Kingdom. When the FLEX-DARK is powered on, it will check one of these SIM cards for network connectivity, and if it finds a useable cellular signal, it stops searching, using that network to send photos and videos to your phone.

However, if the first SIM card cannot find a reliable cellular signal, it will switch to the second SIM card, repeating the process until it can achieve a strong enough connection. The addition of two SIM cards ensures that, if there is a viable network connection to be made, your wireless trail camera is going to make it.

Because these SIM cards work across every major provider, should something happen to the quality of the connection once it's been made, the FLEX-DARK will automatically check the other SIM card to see if a stronger network connection has become available, switching over to the strongest cellular signal and ensuring you always remain connected — meaning you'll never miss any movement within your observation area.

Robust Build Quality

The FLEX-DARK features a robust build quality, with an improved latching system ensuring batteries and internal controls are nice and secure (the addition of a padlock hole lends an added level of security). The new bodyshell — in ghost grey for better concealment — has been constructed from ABS composite plastic for UV protection and impact resistance. Plus, a new, flexible antenna with no-slip brass hardware will not snap or move out of position.

Capture Modes

This wireless trail camera offers capture modes, including Photo mode, for still image capture; Video mode for video recording with audio; and Time-Lapse and Time-Lapse+ (Time-Lapse+ mode will take photos at user-defined intervals or when the sensor is triggered).

Transmission Plans

Spypoint are the only manufacturers of cellular trail cameras to offer a completely FREE photo transmission plan for their devices, offering 100 photos per month at zero cost. But, if you require more than 100 photos, there are a wide range of data plans available, so you can stay in the know when it comes to activity in your observation area.

Choose monthly payments for the convenience of no contract observation, annual payments for discounts of up to 33%, or get an additional 20% off all pricing when you join the Spypoint Insider's club. Find out more here: <https://thomasjacks.co.uk/spypoint-transmission-plans/>
