Description

High-Quality Images & Videos

The FORCE-24 wireless trail camera from Spypoint features a 24MP camera with a lightning-fast 0.5s trigger speed, capturing high quality images and 2K video whenever its motion sensor detects movement. With a 21m detection range and a 21m flash range, the FORCE-24 will ensure you are always in the know when it comes to activity within your observation area. Stored on the camera via an SD card, images and videos are captured in stunning full colour by day and in black and white by night.

Multiple Capture Mode

The FORCE-24 features three capture modes: Photo, Video (with sound), and Time-Lapse, the latter of which will take photos at user defined intervals, making this trail camera ideal for monitoring an area at specific times of day. This trail camera also offers multi-shot mode, which captures up to five photos per detection for closer inspection.

Covert Nighttime Observation

28 low-glow IR LEDs, along with infrared boost technology, achieve a flash range of 21m, illuminating your observation area whilst remaining almost invisible to the naked eye. This means you can reliably capture images and videos at night without spooking wildlife or being detected by the human eye. Infrared boost will maximise the lighting in your observation area at night, so no movement goes undetected.
