Description

Partly due to the quality of its high definition lens, the produced image is extremely rich in contrast, brilliant in colour and razor sharp. The high light-transmission contributes to an optimal image from dawn to dusk. The true-to-life colour rendering and overall image sharpness, that are on top of every user's wish list, are without any doubt the strongest characteristics of the KSP 80 HD. Sharpness is there from center to edge, making sure nothing slips your sight within the large field of view of the 25-50x wide-angle zoom eyepiece. Thanks to this wide angle zoom eyepiece, you no longer have to choose between the traditional wide-angle or zoom eyepiece... As this eyepiece offers the best from both worlds with a magnification from 25x till 50x combined with a field of view from 39.5 till 28 meters. The image quality remains impressive with each magnification, making this eyepiece rapidly indispensable to its user. For the overall construction and ergonomic design, Kite has drawn ideas from their long time expertise in birdwatching. A most appreciated innovation on the KSP scopes is the focus wheel. Extremely fast and precise. The unique internal mechanism allows the user to go from close focus (just 3.7 meters) to infinity in record time. The overall construction of the KSP scopes is designed to meet the 30 year warranty and even more than that.

Lightweight and compact construction
MHR Advance + coating system
Highest grade 80mm HD lens
39.5 meter field of view
World leading optical performance
