Description

No more disadvantages, only advantages. The Lynx HD is designed to meet the requirements of any type of usage, but specially any type of environment. For there is so much to see... The Lynx HD is compact, light and pleasant to hold. The extra-comfort eyecups, large focus wheel and soft rubber armour contribute even more to the ease of use and comfort of these binoculars. The Lynx HD becomes entirely amazing when one looks through them. The first thing that catches the eye is the extremely wide field of view of 151m/8x and 120m/10x. The optical high-definition system delivers best resolution and contrast. Lenses and prisms are of highest quality and treated with KITE's latest technologies in coating, offering you brilliant colour reproduction and an exceptionally bright image. The outer lens surfaces also feature KITE's new PermaVision coating which makes them dirt-and water repellent, but also much more resistant to scratches than conventional lenses. Because of the PermaVision coating lenses need a lot less maintenance and simply last much longer. But specially, they are always ready to look through regardless of circumstances.
