Description

Set new standards in photography

The RF 28-70mm F2L USM offers the kind of image quality you'd expect from a prime lens, and adds an f/2 maximum aperture for more creative control.

Image quality that has to be seen to be believed

The RF 28-70mm F2L USM has all the optical, mechanical and electronic advantages of the EOS R system. Achieve extraordinary image quality and expect very high sharpness with low levels of distortion.

Smooth, near silent autofocusing

Focus quickly and in near silence, thanks to an advanced ring-type USM AF motor. When combined with the EOS R system's silent shooting technology, photographers can remain discreet.

Simply brilliant in low light

Experience faster shutter speeds and f/2 aperture that can freeze subject and camera movement. With a shallow depth of field, the RF 28-70mm F2L USM is ideal for emphasising a pin-sharp subject.

Intuitive and seamless control

The RF 28-70mm F2L USM features a customisable Lens Control Ring, which lets photographers respond instinctively to changing conditions by quickly adjusting a variety of settings including aperture, shutter speed, ISO and exposure compensation.
