Description

An ultra-wide zoom for versatile views

Get more in the shot even when you can't stand back and experiment with foregrounds, backgrounds, scale and size. Capture wide views, up close or far away, indoors or out for stills and video.

Explore, experiment and enjoy ultra-wide creativity

Discover angles you never thought possible. A 0.5x magnification allows stunning wide close-up shots while a combined lens control and focus ring helps you fine tune images while you shoot.

Take control and shoot handheld

Shoot or film in low light without reaching for a tripod. A 4-stop Optical Image Stabilizer¹ produces smooth, shake-free results while Movie Digital IS gives super smooth videos even while walking.

Use the slider to see how the lens' Optical Image Stabiliser and Movie Digital IS can deliver shake free shots.

Thanks to the RF mount, the RF-S 10-18mm F4.5-6.3 IS STM is Canon's smallest and lightest ultra-wide zoom, featuring a lens retraction mechanism to make it even smaller when not shooting – ideal when you can only take a smaller bag. It's the perfect wide lens to take on your travels.

Shoot great movies, let the lens do the work

Stunning quality movies come easily thanks to an STM motor that performs smoothly for cinematic quality focus pulls. Focus breathing correction compatibility² provides a consistent, natural looking field of view when you are shifting focus.
