Description

Perfect for Today, Ready for Tomorrow

Getting the best quality demands tight control of optical aberrations. XF23mmF1.4 R LM WR uses two aspherical lens elements to suppress spherical and coma aberration, plus three ED lens elements to reduce axial chromatic aberration. The result is superb high-resolution for current and future generations.

Striking the Perfect Balance

Optimum image quality shouldn't come at the expense of portability. XF23mmF1.4 R LM WR blends the two perfectly, delivering high-resolution

results with a weight of just 380g (0.84lb) – making this an easy-to-carry companion everywhere you go.

Enjoy Close Control

XF23mmF1.4 R LM WR focuses down to just 19cm (7.48in). Use this versatility to create dynamic close-up images, with tight control over both foreground and background elements.

Perfect For Those Unpredictable Moments

The best images happen when we least expect them, which is why XF23mmF1.4 R LM WR features a redesigned internal focusing mechanism. Driven by a fast, near-silent linear motor, enjoy an immediate response and precise results. Those unpredictable moments will turn into a lifetime of memories.
