

Fujifilm XF10-24mmF4 R OIS WR

Capture All the Excitement The magnitude of the Colosseum, the extravagance of the Sagrada Família, and the grandeur of the Taj Mahal may dwarf us with their breathtaking beauty, but they also fill us with inspiration to make images of their awesome silhouettes towering over the horizon. Therefore, we challenge ourselves to find the right perspective to encapsulate the scene and connect with these architectural marvels, so we can channel the exhilaration of being in their presence into new creative visions. FUJINON XF10-24mmF4 R OIS WR can assist you in creating images that not only communicate the excitement of being in the moment but also help you tell stories that fully convey the expansiveness of the scene around you. Make your photos feel like they have never felt before.

Description

Price £899.00

With a 35mm equivalent focal range of 15-36mm, XF10-24mmF4 R OIS WR is a compact wide-angle zoom that gives you access to all the classic 35mm wide-angle focal lengths in one lens. Regardless of which one you choose, this lens is sure to help you tap into what makes wide-angle photography truly joyful and enjoyable.

Engineered to have precise, responsive autofocus, creating images with XF10-24mmF4 R OIS WR becomes instinctive, near-silent, and accurate. Lightweight focusing elements snap into place with the help of a high-precision motor, easily keeping subjects pin-sharp and reliably holding focus on them, even if they are moving within the frame. Simply create images as you see them and have the freedom to find the story

in any moment.

Aside from weather-resistance, which primarily protects XF10-24mmF4 R OIS WR against dust and moisture, several other improvements have been brought to the newest iteration of this lens. For example, an A-position lock has been added to the aperture ring to prevent unexpected changes to the lens's aperture settings. A new aperture scale has also been added to the aperture ring to allow for aperture settings to be checked without the need for on-screen displays. Last, the width of both the aperture and focus rings have been reduced by 1mm, shaving 25g (0.9 oz) off the total weight of the lens when compared to the previous version. These improvements result in a lens that is practical, portable, and durable, which means it's simply reliable when those moments matter most.

Explore new places and feel free to forget your tripod, creating from new angles and framing exciting compositions, even after the sun goes down. Added stability comes to XF10-24mmF4 R OIS WR in the form of a new, sophisticated gyro sensor that improves Optical Image Stabilization (OIS) from its previous iteration by one whole stop. This brings vibration reduction performance up to 3.5 stops, which can be further extended to 6.5 stops when it is paired with a current X Series camera equipped with in-body image stabilization (IBIS), like FUJIFILM X-T4. Regardless of the camera it is used with, one thing is certain, steady, handheld images are on the horizon.
