Description

Breathtaking G Master quality right out to the image edges

Two high-precision XA (extreme aspherical) lens elements effectively correct distortion and most types of aberration. This new optical design also employs an ED (extra-low dispersion) glass element to suppress chromatic aberration. And with our original Nano AR Coating II on lens surfaces, internal reflections that can cause flare and ghosting are dramatically reduced.

Innovative optics and an F1.4 maximum aperture combine to deliver magnificent bokeh. Deep, creamy background and foreground bokeh at F1.4 are ideal for making portrait subjects stand out from their surroundings. Advanced features that contribute to superb bokeh quality include XA (extreme aspherical) elements that effectively prevent onion-ring bokeh, and careful optimisation of spherical aberration during design and manufacture.

A lightweight and compact lens with incredible performance

XA (extreme aspherical) elements precisely positioned in an innovative design, high-thrust XD linear motors, and the latest compact circular aperture unit work together in a large-aperture high-resolution lens that is only 80.6 mm in outer diameter and 96.0 mm in length while weighing just 516 grams (18.3 oz.). A unique blend of mobility and low-light performance make it an ideal choice for everything from portraits to snapshots.
