#### Description

Leofoto Poseidon LP-284C Carbon Fiber Tripod engineered to withstand the harshest conditions without compromising performance. Crafted with Toray 100% 10-layer carbon fibre leg tubes featuring a cross rhombus structure, this tripod delivers unparalleled strength, stability, and minimal vibration.

Designed to endure water, sand, and dust, this tripod boasts a maintenance-free system, saving valuable time for photographers/shooters and enhancing efficiency. Its anti-twist technology, with three embedded silica gel mats, ensures stability even in water.

Unlike traditional tripods with a centre column, the LP-284C features three fully folded legs, maximising stability and compactness. The hollow-out top plate design reduces weight while maintaining flexibility, ideal for shooters on the move.

Safety and anti-rotation are prioritised with three set screws on the top plate to secure the ball head, providing peace of mind during shoots. The included LH-30 Ball Head features a low-profile design for enhanced reliability, with an ergonomic main locking knob for easy handling and smooth movement.

**Please be aware that any additional accessories shown in product images such as cameras, phones and arm attachments are shown for illustrative purposes only and are not included.**
