Description

The Leofoto Urban LX-225CT 1365mm Tripod with XB-32Q Ball Head is a remarkable fusion of cutting-edge innovation and timeless design, crafted to enhance every moment of your photographic journey. Designed with portability, durability, and versatility in mind, this tripod is an essential companion for photographers seeking exceptional stability and ease of use.

When folded down, the Leofoto Urban LX-225CT measures a compact 33cm (without the ball head), thanks to its ingenious 180-degree leg-folding mechanism. This makes it incredibly easy to carry during travel, ensuring you're always ready to capture the perfect shot. For ultimate adaptability, the tripod features a ground setting mode. By removing the centre column and adjusting the leg angles to the maximum, you can install the included short centre column and mounting platform to achieve a stable low-angle setup.

Constructed from Toray 100% 10-layer carbon fibre, the tripod's legs boast a cross-rhombus structure, delivering outstanding strength, enhanced stability, and reduced vibration. Its lightweight yet robust hollow-out spider design contributes to overall portability without compromising durability. The leg lock system features a quick and reliable 1/4 turn rotation mechanism and one-piece shims for increased reliability and reduced maintenance.

The included XB-32Q Ball Head offers a professional-grade experience. Its large, ergonomic main locking knob ensures effortless handling, while the precisely machined ball delivers silky-smooth movement. With a numbered drag tension knob, users can finely control tension, and the laser-engraved scale on the panning base makes panoramic shooting accurate and straightforward. The Arca-Swiss style quick-release plate and clamp add an extra layer of convenience, allowing seamless transitions between shots. Engineered with a 0.01mm fault tolerance and large-cavity ball, the ball head ensures exceptional precision and stability.

The tripod caters to various shooting angles with its semi-automatic angle stop system, allowing quick adjustments to 23°, 55°, or 85° positions. Additionally, the bottom and side of the spider include UNC 1/4" mounting holes, perfect for attaching accessories such as magic arms or smartphones, broadening its functionality beyond cameras.

Folded with the ball head, the tripod measures a modest 49cm, while its compact form makes it a go-to solution for photographers on the move.

Please be aware that any additional accessories shown in product images such as cameras, phones and arm attachments are shown for illustrative purposes only and are not included.
